CSA3714 - Software Testing
CO1 - AT3 MCQ

Divyadharshini. A
192411118

1. a) Developer
2. b) Improve testing strategy
3. b) Product reliability
4. b) High coverage
5. a) Efficiency in testing
6. b) Coding defect
7. b) Process-driven testing
8. b) Testing efficiency
9. a) Functional defect
10. c) Requirement defect
11. b) Earlier phase issues
12. a) Functional defect
13. b) Coding defects
14. b) Improve quality
15. b) Software quality process
16. b) External behavior
17. b) Risk-based testing
18. c) Store defect details
19. a) Requirement defect
20. b) Detect edge-case defects
21. b) Fix prioritization
22. b) Consistent quality
23. b) Experience-based testing
24. b) Objectivity
25. b) Prevent recurrence
26. b) Prioritize fixing
27. a) Predicting issues
28. b) Poor process
29. b) Requirement phase
30. b) Structured testing
31. d) Deployment time
32. b) Teamwork
33. b) Early defect detection

34. b) Organized testing

35. b) Increased defects in production

36. b) Improved software quality

37. c) Typo errors

38. a) Coding defect

39. b) User requirements

40. b) Test execution

41. b) Tester's responsibility

42. b) Traceability

43. b) Ensure fixes work

44. b) Maintenance cost

45. b) Organize defects

46. b) Poor traceability

47. b) Core functionality

48. a) Reduce defects cost

49. b) Security defect

50. b) Defect clustering principle

51. a) Developers fix quickly

52. b) Redundant tests

53. b) Test design technique

54. b) Validation

55. b) UI defect

56. b) Performance defect

57. b) Testing as an engineering activity

58. b) Executing test cases systematically

59. b) Process gap

60. b) Exhausive testing is impossible
